RENOLIT Flooring Components Product Information

Flooring
components made
from a wide range
of materials

PRODUCT

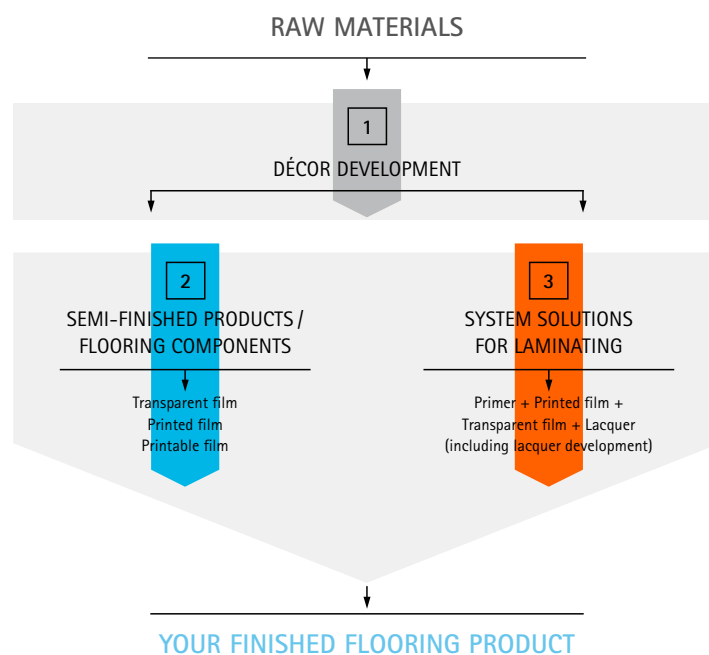

In the flooring sector, the trend towards differentiation and individuality grows ever stronger.

RENOLIT is at the forefront of this trend with its Flooring Components range of tailor-made modules for laminate flooring and elastic floor coverings.

RENOLIT manufactures both semi-finished and complete lamination system solutions in product compositions such as PVC and PET, according to individual specifications. RENOLIT also supplies semi-finished products in the form of transparent films, printed and printable blank layers that are appropriate to the specified substrate. These system solutions consist of primer, a printed film layer and a further transparent embossed surface. Our Design Centre also develops bespoke designs in accordance with customer specifications.

In close cooperation with our customers, we create décors that range from stone and woodgrains to individual modern abstract designs. A wide choice of colour nuances and embosses completes the picture, enhancing the visual and haptic experience.

These high-quality interior application films comply with the most stringent quality and design standards. Functionality, durability, easy cleaning, mechanical and abrasion resistance as well as many other benefits complement the flooring systems of RENOLIT.

DESIGN CENTRE

Design consultation and development play a key role at RENOLIT and form the basis of our success. We offer our customers contemporary décors, whilst being at the forefront in anticipating future trends. We work intensively in the design industry, therefore we understand the market and what motivates our customers.

Customers can choose from our extensive range of existing décors or work with our expert teams to create exclusive designs of their own. Our design specialists will be in close cooperation with you throughout the process, with advice and support always available.

YOUR DÉCOR CHOICE DEVELOPED BY US

The RENOLIT Design Centre can create flooring décors based on your own concepts. Our experienced design specialists have a perfect eye for design and can develop individual décors in accordance with customer specifications and requirements.

Equipped with the latest technology and with a great deal of technical printing experience, our experts manage the entire process chain - from décor development, through to digital processing and the preparation of the finished digital and engraving data.

Our design specialists in Bochum have a wealth of technical expertise and a keen eye for that certain something.

Development of bespoke designs from natural references such as wood or stone samples.

DESIGN CENTRE

The initial stage involves a meticulous search by our design experts for a suitable original reference for the final décor.

Examples of original references include samples of genuine woodgrains or stone surfaces. Also popular are artificial or abstract décors, which although not naturally occurring, may nevertheless harmonise perfectly with current tastes and contemporary interior design trends.

Designs are then further modified to customer requirements in terms of texture, colouring, shading and width. The design process ensures that customers receive an aesthetically pleasing and natural surface structure, whose individual features can be further enhanced or modified.

DESIGN, MADE FOR YOU.

FUNCTIONAL SOLUTIONS

OPTIMAL PERFORMANCE THROUGHOUT. FILMS FOR ELASTIC FLOOR COVERINGS.

RENOLIT offers a wide selection of films to give you the best possible choice for elastic flooring applications. The range includes a wide variety materials, thicknesses, widths and product grades. Films developed in PVC and PET formulations are available as both printed and transparent variants.

Product compositions conform to all approval requirements for the building and construction sector, yet the products equally impress in terms of design variety and functional performance such as abrasion resistance and durability.

Thanks to a comprehensive choice of colours and décors, these robust films offer a wide creative choice, even for flooring areas subject to heavy use. We can also offer unprinted film layers to give you the widest possible design scope. If digital printing is your preferred option, RENOLIT recommends that you conduct your own printing trials.

ADDED VALUE THROUGH SYSTEM SOLUTIONS

RENOLIT offers you system solutions in the form of tailor-made modules, which are comfortable to walk on and significantly warmer underfoot. Room and footfall noise are significantly reduced thanks to the particular product composition of the system solution.

Multi-layer construction gives Flooring Components their outstanding performance properties:

Composition of customer-bespoke product construction.

RENOLIT's PVC and PET-based system solutions in a wide range of décors are ideally suited for lamination on HDF, MDF or other board substrates.

Surface structures ranging from synchronous pore structures to the individual design requirements of the wear layer are possible. Optimum functionality is assured - our system solutions have impressive performance characteristics such as mechanical resistance and resistance to light and staining, with the surface coating providing long-lasting floor protection.

OUR RAW MATERIALS

Printed and transparent film layers are available in PVC or PET formats, with both variants being REACH compliant.

The choice of quality materials is reflected in the products' stain, abrasion and mechanical resistance, durability, light fastness, easy to clean surface and wide-ranging design options.
