

Rely on it.

Descend into a mine in Cuba with us. In this hidden vault, the walls echo with tales from the depths of the earth. Over one hundred years ago, men down here dug for their luck, hoping to stumble across a nugget of gold. What they found instead was a yet unnamed mineral: A grey stone, clad in a shimmering ensemble ranging from bronze to brass yellow. Six barrels clinking with the weight of the rocks would make it from Cuba to England across the seas, imported by mineralogist August Breithaupt in 1843. He christened it Cubanite – a fusion of the Spanish word "Cubano" and the mineral suffix "-ite" – to pay homage to the mineral's roots, forever linking its identity to the mystique of the Caribbean Islands.

Now picture the academic salons of the time and the scholars gathered in anticipation; listen to the hushed whispers of curiosity. Here, Breithaupt dissected Cubanite's unique composition with a discerning eye and skilled fingers, revealing the harmonious trio of copper, iron, and sulphur that adorned the stone. Word of the newfound gem spread like wildfire among scientific circles; it was – and still is – coveted for its crystalline structure and mysterious sheen. But it's not only found deep below the surface of the Earth; it also travels through the depths of space. NASA's Stardust spacecraft, a robotic voyager tasked with collecting interstellar dust samples from beyond our orbit, brought back traces of Cubanite that formed in places beyond our imagination.

Cubanit Grey Paintflow brings this cosmic traveller back to Earth, its smoky hues shrouding walls and furniture in a certain mystique. With the colour being inspired by a stone, its realistic Paintflow surface finish mimics the appearance of wood soaked in paint, creating an intriguing fusion of seemingly disparate elements.

Combine this with other subdued colours like Taupe Grey Premier Matt or Angora Grey Premier Matt to create a perfect neutral canvas for furniture and decorations derived from nature, creating a calming sanctuary for all senses.

CUBANIT GREY PAINTFLOW

CUBANIT GREY PAINTFLOW

Background information:

RENOLIT Cubanit Grey Paintflow is a warm grey colour with the realistic Paintflow surface finish. With its mocha undertones, it fits perfectly into interior settings with neutral colour palettes.

Characteristics:

The Paintflow surface texture highlights the distinct woodgrain engravings. In combination with the superior matt finish, it creates an aesthetic that is exquisite both visually and by touch.

Application:

Kitchen
Bathroom
Interior Furniture

Perfectly combined with:

Taupe Grey Premier Matt
Angora Grey Premier Matt
